ahhNatural Answers Consumer Call For Non-Toxic Hot Tub Maintenance Solution

Truckee, Calif. (Fall 2006) – ahhNatural combines state of the art water purifying technology with a boutique spa treatment to present a healthy, non-toxic alternative to hot tub maintenance. A sleek design for a clean spa, ahhNatural replaces toxic chemicals while controlling bacteria and clarifying water for a rejuvenating, environmentally friendly home hot tub experience.

Inventor Roy Bowers used his expertise with high end water filtration and purification systems to combine high quality water care with a replenishing spa experience for the home. The revolutionary process uses a proven technology that relies on chemical reactions between a unique collection of vitamins and minerals to keep spas safe and clean; a spa treatment that eliminates all need for noxious chemicals like chlorine, bromine and toxic algaecides. Furthermore, by removing the chemicals from everyday hot tub care this mindful new product does away with the unpleasant skin irritation of some spa treatment products and toxic waste water that can be detrimental to the environment.

ahhNatural replaces chemicals with a proprietary combination of minerals, vitamin C and ancient sea salts, creating a soft, soothing, rejuvenating experience. The minerals at work help relieve stress to your muscles and improve circulation to the skin, promoting the production of skin firming collagen. Additionally, this long lasting treatment is easy to use and requires minimal maintenance. Supplemented by everyday

household items to manage pH, such as baking soda, vitamin C and hydrogen peroxide, Bowers' system is a simple 16" X 16" pad of minerals that rests on the tub floor, keeping it clean all year.

ahhNatural makes sense when it comes to creating an enjoyable, gentle hot tub experience. Now personal spa owners can relax without worrying about irritated skin or chemical effects on their lungs and focus on treating themselves to a retreat at home. ahhNatural allows hot tub owners to utilize their investments in the best way possible, indulging in a boutique spa treatment on a daily basis. Furthermore, ahhNatural's sustainable qualities and environmental benefits inspire a mindful consumer decision.

ahhNatural is a non-toxic hot tub maintenance solution. Through the use of natural minerals and vitamin C, ahhNatural replaces chemicals to create a healthy retreat for the body. With comparable costs and lower maintenance time to traditional systems, ahhNatural was developed as a people safe, environmentally friendly alternative to traditional chemical sanitizers.
